The 787-10 Dreamliner is the newest and longest member of the super-efficient 787 family. As a stretch of the 787-9, the 787-10 leverages the family's proven technology, long range and preferred passenger experience, with unprecedented efficiency: 10 percent better fuel and emissions than the best on offer by the competition and 25 percent better than the airplanes it will replace.

Boeing: 787-10 First Flight Now, it's been confirmed by Boeing that the rate of production of the 787

Page 3/36

Dreamliner will be slashed to just 10 aircraft per month by the early part of next year. Flight Global broke the news earlier today, saying that the airframer attributes the change to “the current environment and near-term market outlook”.

Boeing To Scale Down 787 Production To Just 10 Per Month ...

Boeing 787-10 Dreamliner Engine Boeing 787-10 Dreamliner are powered by Rolls-Royce Trent 1000 or GE Aviation GEnx-1B engines. The Trent 1000 engine will produce a maximum thrust of 78,000 lbf, while the

Page 4/36

GENx-1B will provide a maximum takeoff jump of 76,100 lbf.
