The Regatta in the Skies is a wonderful, complex collection of the best long poems from each phase of Laurence Lieberman's distinguished but still developing career, from his midwestern American childhood to his travels to the exotic landscapes of the underwater world, Japan, and the Caribbean. In a number of recent poems, Lieberman view islands of the West Indies through the eyes of intriguing local artists. Using cross-cultural relationships on individual and national levels to create a new kind of "poetry as witness," he weaves stories into the poems. No less engaging than his subjects are his cadences, ordered in intricately textured lines and original syllabic stanza patterns. "Orange County Plague: Scenes" focuses on the plight of the orange trees in southern California, blending motifs of politics, social history, civil rights of ethnic minorities, and the mythology surrounding them with descriptions of nature and landscape. This linked progression of seventeen poems, structured like a sonnet sequence, establishes the primacy of place in Lieberman's continuing canon. The longest poems deal with Jamaica, but others take as their settings a number of the smaller Caribbean islands, including Montserrat. In the poem "The Factories of Bay Leaf and Lime" Lieberman celebrates instinctive beauties of Montserrat's culture and workplace, and helps memorialize its national character at a time when the entire country is threatened with extinction by a volcano. The Regatta in the Skies is a bold and unforgettable collection from a poet at the top of his form.

For Stirling engines to enjoy widespread application and acceptance, not only must the fundamental operation of such engines be widely understood, but the requisite analytic tools for the stimulation, design, evaluation and optimization of Stirling engine hardware must be readily available. The purpose of this design manual is to provide an introduction to Stirling cycle heat engines, to organize and identify the available Stirling engine literature, and to identify, organize, evaluate and, in so far as possible, compare non-proprietary Stirling engine design methodologies. A breadth of new digital platforms has dramatically expanded the range of possibilities for exchanging anything required by business or personal needs from accommodation to rides. In the virtual marketplaces shaped and ruled by these novel matchmakers, rather than by a single centralized entity, value is created through the granular interaction of many dispersed individuals. By allowing instantaneous and smooth interaction among millions of individuals, platforms have indeed pushed the digital frontier farther and farther, so as to include within it even services once not capable of direct delivery from a remote location such as accommodation and passenger transport. Legal disruption is also underway with foundational dichotomous categories, such as those between suppliers and customers, business and private spheres, employees and self-employed, no longer viable as organizational legal structures. This is the essential background of the first book to relate what is synthetically captured under the umbrella definition of ‘ sharing economy ’ to key features at the core of European Value Added Tax (EU VAT) and to look at the feasibility of a reformed EU VAT system capable of addressing the main challenges posed by these new models of production, distribution and consumption of goods and services. Specifically, the study analyses five legal propositions underpinning the current EU VAT system as the following: taxable persons; taxable transactions; composite supplies; place of supply rules; and liability regimes for collection and remittance of VAT. Exploration of these five legal propositions is meant to assess the practical feasibility of shoehorning the main sharing economy business models – notably, those available in the accommodation and passenger transport sectors – into the framework of existing EU VAT provisions. The author further draws on the normative standards of equality, neutrality, simplicity, flexibility and proportionality to test the ‘ reflexes ’ of the current EU VAT system in the sharing economy domain. Opportunities for reform of the current EU VAT system are in turn evaluated with each chapter including cogent proposals in the form of incremental and targeted amendments to the current EU VAT provisions. As the first comprehensive analysis of the treatment of the sharing economy for VAT purposes, the book provides not only a theoretical framework for future studies in the tax field but also indispensable practical guidance for VAT specialists confronting daily with the many challenges ushered in by the sharing economy. Moreover, the various solutions and recommendations advanced in the book offer valuable insights to international and national policymakers dealing with similar issues under other VAT systems.
