Humans, especially children, are naturally curious. Yet, people often balk at the thought of learning science--the "eyes glazed over" syndrome. Teachers may find teaching science a major challenge in an era when science ranges from the hardly imaginable quark to the distant, blazing quasar. Inquiry and the National Science Education Standards is the book that educators have been waiting for--a practical guide to teaching inquiry and teaching through inquiry, as recommended by the National Science Education Standards. This will be an important resource for educators who must help school boards, parents, and teachers understand "why we can't teach the way we used to." "Inquiry" refers to the diverse ways in which scientists study the natural world and in which students grasp science knowledge and the methods by which that knowledge is produced. This book explains and illustrates how inquiry helps students learn science content, master how to do science, and understand the nature of science. This book explores the dimensions of teaching and learning science as inquiry for K-12 students across a range of science topics. Detailed examples help clarify when teachers should use the inquiry-based approach and how much structure, guidance, and coaching they should provide. The book dispels myths that may have discouraged educators from the inquiry-based approach and illuminates the subtle interplay between concepts, processes, and science as it is experienced in the classroom. Inquiry and the National Science Education Standards shows how to bring the standards to life, with features such as classroom vignettes exploring different kinds of inquiries for elementary, middle, and high school and Frequently Asked Questions for teachers, responding to common concerns such as obtaining teaching supplies. Turning to assessment, the committee discusses why assessment is important, looks at existing schemes and formats, and addresses how to involve students in assessing their own learning achievements. In addition, this book discusses administrative assistance, communication with parents, appropriate teacher evaluation, and other avenues to promoting and supporting this new teaching paradigm.

***This is a handbook for language teachers who would like to develop their own reading materials or who wish to enrich a reading course. It offers a classification and description of exercises aimed at developing different reading skills. While the book is designed primarily for teachers of English as a second language, the exercises are equally appropriate for the teaching of other foreign languages and much of the book is relevant to the teaching of first-language reading skills. The question-types range from the familiar (for example, multiple-choice and open questions) to highly original exercises which require the integration of different skills and an active, creative response from the student. It encourages teachers to introduce variety into the teaching of reading and offers them a great deal of resource material to draw on.***

***This book offers a range of perspectives and insights from around the world on the teaching and learning of listening, speaking, reading and writing. It brings together contributors from across six continents, who analyse a wide range of teaching and learning contexts, including primary, secondary, tertiary, private, and adult ESL/EFL classes. In doing so, they provide locally relevant accounts that nonetheless resonate with other contexts and wider concerns. This informative and practical edited collection will appeal to students and scholars who are interested in the four building blocks of language learning, as well as language education and teacher education.***

With the Common Core State Standards emphasizing listening and speaking across the curriculum, these long-neglected language arts are regaining a place in schools. For teachers, this means reexamining practices and rethinking expectations. How much do we know about teaching listening and speaking as the complex communication skills they are? How do we teach students to discuss appropriately, integrate and understand the mountains of information they receive, and express themselves clearly and effectively? In this lively and practical book, 20-year teaching veteran Erik Palmer presents an approach aligned to the six Common Core anchor standards for speaking and listening but focused on preparing students for 21st century communication inside and beyond the classroom. Here, you'll get concrete guidance for teaching and assessing \* Collaborative discussion \* Listening and media literacy \* Questioning and reasoning \* Speech presentation \* Effective multimedia use \* Adapting speech to different content and tasks With due respect to reading and writing, we do most of our communicating—in the classroom and in life—through listening and speaking. Filled with examples and specific activities targeted to variety of subjects and grade levels, this book is an essential resource for all teachers interested in helping students acquire core skills that cross the content areas and support long-term success.

Teaching the Core Skills of Listening and Speaking

Over the last decade task-based approaches to language learning and teaching (TBLT) have become a global focus of increased levels of research. Governments around the world have turned to TBLT as a potential solution for curricula that lack authentic and meaningful engagement with language learning and are failing to motivate students as a result. This book focuses on Asia, where this shift has been particularly in evidence. TBLT has often been implemented in top-down approaches to curriculum development, which presents a huge range of challenges at the cultural as well as the pedagogic level. Contemporary Task Based Language Teaching in Asia looks at the drivers, stakeholders and obstacles across the region. Some countries have adapted TBLT to deal with the local constraints, others have found it hard to apply and many are still in the process of investigating its implementation in their specific contexts. This collection is important to all involved in language development, from curriculum reform to materials development. It assists from programme evaluation to the setting of assessment standards. The chapters cover all aspects of language education across Asia, from primary to tertiary, private and public education, as well as innovations at local, regional and national levels.

As a result of current global and international forces, teaching English for academic purposes (EAP) is going through the most dynamic period in its rather short history. The internationalization of higher education, English further solidifying its role as the lingua franca every single day, and the increasing number of higher education institutions around the globe opting for instruction in the medium of English (EMI) are all contributing forces behind this book. The text disentangles the conflicting views and beliefs regarding the standards, provision and practices of EAP. Across its chapters, it closely looks at the world of EAP through the lenses of academic practice, learners, curriculum development, program implementation, and teaching and assessment practices. This book will guide all stakeholders of EAP settings to better understand ways in which research and teaching interact, and inform each other from a number of vital and relevant perspectives.
