Soil is essential to agriculture and a resource that cannot be replaced easily. Nevertheless, its importance to food production and the threats to its sustainability are often overlooked. This book, the 35th volume of *Issues in Environmental Science and Technology*, examines the current status of soils across the globe and their potential for food production to meet the needs of the World's population in the 21st Century. Threats, such as the degradation, pollution and erosion of soil are discussed, along with the

possible consequences of climate change for soil and food production. As an ecosystem service, soil also serves to capture nutrients and sequester carbon, and these issues are discussed in the context of adding value to soil protection. The influence of modern agricultural techniques in enhancing soil productivity is also discussed. Throughout the book case studies support the discussion. Together with the books on Ecosystem Services, Sustainable Water, and Environmental Impacts of Modern Agriculture, this addition to the series will be essential reading for anyone concerned with the environment, whether as scientist,

policy maker, student or lay reader. We all want to believe that when people get cancer, they will receive medical care of the highest quality. Even as new scientific breakthroughs are announced, though, many cancer patients may be getting the wrong care, too little care, or too much care, in the form of unnecessary procedures. How close is American medicine to the ideal of quality cancer care for every person with cancer? Ensuring Quality Cancer Care provides a comprehensive picture of how cancer care is delivered in our nation, from early detection to end-of-life issues. The National Cancer Policy Board defines quality care

and recommends how to monitor, measure, and extend quality care to all people with cancer. Approaches to accountability in health care are reviewed. What keeps people from getting care? The book explains how lack of medical coverage, social and economic status, patient beliefs, physician decision-making, and other factors can stand between the patient and the best possible care. The board explores how cancer care is shaped by the current focus on evidence-based medicine, the widespread adoption of managed care, where services are provided, and who provides care. Specific shortfalls in the care of breast and prostate cancer are identified. A

status report on health services research is included. Ensuring Quality Cancer Care offers wide-ranging data and information in clear context. As the baby boomers approach the years when most cancer occurs, this timely volume will be of special interest to health policy makers, public and private healthcare purchasers, medical professionals, patient advocates, researchers, and people with cancer. Textbook of Palliative Medicine provides an alternative, truly international approach to this rapidly growing specialty. This textbook fills a niche with its evidence-based, multi-professional approach and global perspective ensured by the

international team of editors and contributing authors. In the absence of an international curriculum for the study of palliative medicine, this textbook provides essential guidance for those both embarking upon a career in palliative medicine or already established in the field, and the structure and content have been constructed very much with this in mind. With an emphasis on providing a service anywhere in the world, including the important issue of palliative care in the developing nations, *Textbook of Palliative Medicine* offers a genuine alternative to the narrative approach of its competitors, and is an ideal complement to them. It is essential

*adjuvant chemotherapy treatment which are presently available fail to cure the majority of cancer patients. Pre operative (neoadjuvant) chemotherapy represents a new approach in drug scheduling, based on sound theoretical, pharmacokinetic, and experimental principles. The preoperative timing of chemotherapy before definitive surgery is not a minor change in the therapy of cancer. To be successful, large numbers of practitioners and their patients must participate. Substantial alterations of many aspects of the present management of cancer will have to follow. Therefore, before such therapy can be fully and routinely implemented, results of the novel treatment and*

*its rationale have to be carefully evaluated. In preoperative treatment, other features will likely gain importance. For the first time, clinicians have a chance to follow the in vivo response of the tumor exposed to preoperative chemotherapy. The subsequent histological assessment of the tumor sample may likely become an important prognostic guide, permitting more refined individual approaches to the planning of postoperative adjuvant treatment. The value of such a treatment strategy can already be appreciated in the clinical setting, as seen from the therapy of osteosarcoma. Furthermore, preoperative chemotherapy might render previously inoperable tumors*

## *Our Pacific Coast*

Provides an account of the hurricane which struck Galveston, Texas, in 1900 and killed ten thousand people. In *The Claims of Kinfolk*, Dylan Penningroth uncovers an extensive informal economy of property ownership among slaves and sheds new light on African American family and community life from the heyday of plantation slavery to the "freedom generation" of the 1870s. By focusing on relationships among blacks, as well as on the more familiar struggles between the races, Penningroth exposes a dynamic process of community and family definition. He also includes a comparative analysis of slavery and slave property ownership along the Gold Coast in West Africa, revealing significant differences between the African and

American contexts. Property ownership was widespread among slaves across the antebellum South, as slaves seized the small opportunities for ownership permitted by their masters. While there was no legal framework to protect or even recognize slaves' property rights, an informal system of acknowledgment recognized by both blacks and whites enabled slaves to mark the boundaries of possession. In turn, property ownership--and the negotiations it entailed--influenced and shaped kinship and community ties. Enriching common notions of slave life, Penningroth reveals how property ownership engendered conflict as well as solidarity within black families and communities. Moreover, he demonstrates that property had less to do with

individual legal rights than with constantly negotiated, extralegal social ties.

This handbook provides an easily navigable source of information about the day-to-day management of patients requiring palliative and hospice care. Succinct, evidence-based, topically focused content is supplemented by extensive tables and algorithms. The table of contents and balance of coverage follows the core curriculum of the American Board of Hospice and Palliative Medicine, thus meeting the educational and clinical information needs of students, residents, fellows, and nurse practitioners. An expert team of clinicians, led by world renowned Eduardo Bruera, address approach to care; psychosocial and spiritual issues; impending death;

grief and bereavement; assessment and management of pain; management of non-pain symptoms such as nausea, dyspnea, depression, insomnia, and bleeding; communication and team work; and ethical and legal decision making.

*gynecologic cancer. Offering practical approaches to common clinical problems, Gynecologic Radiation Oncology: A Practical Guide compiles the extensive clinical experience of Drs. Patricia J. Eifel and Ann H. Klopp from MD Anderson Cancer Center into one user-friendly volume. various external beam and brachytherapy techniques to address specific clinical problems, and how to monitor and manage patients during and after treatment. The book focuses on the following items, which can have immediate application to the treatment of patients with gynecologic cancers. It happens once a year, creating a seismic divide throughout the country. It pits brother against brother. It breaks up business deals. It ruins relationships. And once it's finished, all both sides want is for another year to pass by so they can do it again. It is the Texas/Texas

A& M football game. And in the football-obsessed state that is Texas, no single game resonates more. Every year during the Thanksgiving holidays, the two teams meet for something that has become much more than just a game. It's a blood feud that represents a tremendous cultural divide in the state. It's city against country, a rural agricultural school against an urban university. And yet both sides come from the same family, warring cousins who roll up their sleeves once a year in the backyard to settle the question of who's number one—at least for the time being. In

*Backyard Brawl, W. K. Stratton takes you through this rivalry and its history, covering the years when the game was postponed because the fans were just too violent, the branding of UT's beloved steer, Bevo, by a renegade Aggie, the kidnapping of A&M's beloved Reveille by boisterous UT students, the theft of UT's cannon, Old Smokey, and its unceremonious dumping into the murky waters of Austin's Town Lake, and the fistfights that broke out when celebrating UT fans rushed A&M's nearly sacred Kyle Field after Texas won the last-ever Southwest Conference title on the*

Aggies' home turf. Stratton also relates the more serious side of the rivalry, particularly the way both schools came together after tradition turned to tragedy in 1999, when the A&M bonfire collapse killed twelve students. And in a touching epilogue, he captures the angst that hit the College Station campus when officials decided to cancel the return of the bonfire in 2002. Stratton drew a bead on the 2001 season and followed both teams through their schedules leading up to the big clash in College Station. Taking you inside a renowned Aggie Yell practice

and introducing you to fervid yet often zany orange-blooded Texas fans through their elaborate tailgating rituals, he creates revealing portraits of the two teams, including head coaches R. C. Slocum and Mack Brown, both of whom are legends in their own time, destined for the Hall of Fame. *Backyard Brawl* is a fascinating examination of the greatest war in college football, destined to become a classic for students of the game.
