## **~~How To Frame a Pyramid Hip Roof - myrooff.com~~**

**A pyramid hip roof is built on a square building, with four triangular sides that meet at a point at the top. A pyramid hip roof differs from the more common hip roofs that are built on top of rectangular buildings because it has no ridge beam, only a point. Step 1 Pick the pitch of the roof you are building.**

## **~~How to Frame a Pyramid Hip Roof | eHow~~**

**A pyramid roof is a type of hip roof that has four sides that are all triangle shaped and all slope downward. They are built onto a square or rectangular frame. Pyramid roofs are a popular choice for a shed, gazebos, and summerhouses as they are a modern eye-catcher and definitely stand out from other roof types. Due to the special shape of the roof, the pyramid roof is very stable, especially against the wind because the surface of attack is very small.**
