One of the fun parts of geology is learning to read rocks. I don't mean reading words that people have painted or carved on them. Instead, I mean examining the rocks, looking at their minerals, structures, position, fossils, and other things to discover what they can tell us about the history of the Earth. As with reading a book, the first thing you have to do is learn the

The stone ripples you can see in the rocks around the north of Stoer Bay were formed some 1000 million years ago. The rock is the Stoer Group of Torridonian Sandstone, a sedimentary type of rock. Sedimentary rock starts out as little grains carried along in rivers and streams and is built up of many layers of sediment, eventually becoming compacted under the weight of layers above until it becomes rock.
