Writing reliable and maintainable C++ software is hard. Designing such software at scale adds a new set of challenges. Creating large-scale systems requires a practical understanding of logical design – beyond the theoretical concepts addressed in most popular texts. To be successful on an enterprise scale, developers must also address physical design, a dimension of software engineering that may be unfamiliar even to expert developers. Drawing on over 30 years of hands-on experience building massive, mission-critical enterprise systems, John Lakos shows how to create and grow Software Capital. This groundbreaking volume lays the foundation for projects of all sizes and demonstrates the processes, methods, techniques, and tools needed for successful real-world, large-scale development. Up to date and with a solid engineering focus, Large-Scale C++, Volume I: Process and Architecture, demonstrates fundamental design concepts with concrete examples. Professional developers of all experience levels will gain insights that transform their approach to design and development by understanding how to Raise productivity by leveraging differences between infrastructure and application development Achieve exponential productivity gains through feedback and hierarchical reuse Embrace the component's role as the fundamental unit of both logical and physical design Analyze how fundamental properties of compiling and linking affect component design Discover effective partitioning of logical content in appropriately sized physical aggregates Internalize the important differences among sufficient, complete, minimal, and primitive software Deliver solutions that simultaneously optimize encapsulation, stability, and performance Exploit the most established levelization techniques to avoid cyclic physical dependencies Use lateral designs judiciously to avoid the "heaviness" of conventional layered architectures Employ appropriate architectural insulation techniques for eliminating compile-time coupling Master the multidimensional process designing large systems using component-based methods This is the first of John Lakos's three authoritative volumes on developing large-scale systems using C++. This book, written for fellow software practitioners, uses familiar C++ constructs to solve real-world problems while identifying (and motivating) modern C++ alternatives. Together with the forthcoming Volume II: Design and Implementation and Volume III: Verification and Testing, Large-Scale C++ offers comprehensive guidance for all aspects of large-scale C++ software development. If you are an architect or project leader, this book will empower you to solve critically important problems right now – and serve as your go-to reference for years to come. Micro-Hydro Design Manual has grown from Intermediate Technology's field experiences with micro-hydro installations and covers operation and maintenance, commissioning, electrical power, induction generators, electronic controllers, management, and energy surveys. There is an increasing need in many countries for power supplies to rural areas, partly to support industries, and partly to provide illumination at night.

Government authorities are faced with the very high costs of extending electricity grids. Often micro-hydro provides an economic alternative to the grid. This is because independent micro-hydro schemes save on the cost of grid transmission lines, and because grid extension schemes often have very expensive equipment and staff costs. In contrast, micro-hydro schemes can be designed and built by local staff and smaller process designing large systems using component-based methods This is the first of John Lakos's three authoritative volumes on developing large-scale systems using C++. The wildly inventive debut collection of stories by the Oscar-nominated star of The Social Network. "Hilarious . . . It's a hoot" (People, The Best New Books). Jesse Eisenberg, known for his iconic film roles, his regular pieces in the New Yorker and two critically acclaimed plays, proves himself "a deeply original comic voice" in these 28 stories "about the funniness, sadness, and strangeness of everyday life and they really made me laugh" (Roz Chast). Moving from contemporary LA to the dorm rooms of an American college to ancient Pompeii, Eisenberg throws the reader into a universe of social misfits, reimaged scenes from history, and ridiculous overreactions; a college freshman forced to live with a roommate is stunned when one of her ramen packets goes missing ("She didn't have 'one' of my ramens. She had a chicken ramen."); Alexander Graham Bell has teething problems with his invention ("I've been calling Mabel all day, she doesn't pick up! Yes, of course I dialed the right number—217"); and in the title story, a precocious and privileged nine-year-old boy finds himself in the uncomfortable position as an amateur restaurant critic. Featuring illustrations by an award-winning cartoonist (Jean Jillian), this "alphabet soup of sketches, riffs, and innovations" (Seattle Times) explores the various insanities of the modern world, "playfully bringing both familiar and wholly original scenarios to life" (Marie Claire). Guy Bourdin, who died in 1991, was a legend in the world of fashion photography. He was the most radical and audacious photographer of his generation but his reputation has been surrounded in secrecy - he rarely allowed his photographs to appear outside the pages of French Vogue. No book of his work has previously been published. His estate was frozen by the courts until 1997, after which his son, Samuel, gained control of his work as a result of which this long-awaited book can be published. Bourdin was originally a painter and a friend of Man Ray. His fashion photographs began to incorporate his surrealist influences. Fashion photography became an arena for his personal obsessions. The results are as shocking and astonishing as any commercial photograph ever published. They were executed meticulously. Despite his intense eroticism, subversion and, as Cecil Beaton described, 'his grotesque little games', Beaton referred to him in 1975 as 'unquestionably the most interesting fashion photographer in Paris today'. His work was said to have represented 'the look of an era - glamorous, hard-edged, cleverly spiced with vulgarity... rich with implied narratives and strong erotic undercurrents'
