Basic set notation (practice) | Probability | Khan Academy

A combination of a real and an imaginary number in the form $a + bi$, where a and b are real, and i is imaginary. The values a and b can be zero, so the set of real numbers and the set of imaginary numbers are subsets of the set of complex numbers. Examples: $1 + i$, $2 - 6i$, $-5.2i$, 4 . Read More ->

Common Number Sets - mathsisfun.com

Note that the set of irrational numbers is the complementary of the set of rational numbers. Some examples of irrational numbers are $\sqrt{2}$, π , $\sqrt[3]{5}$, and for example $\pi=3,1415926535\dots$ comes from the relationship between the length of a circle and its diameter.

Set of numbers (Real, integer, rational, natural and ...

Median refers to the middle value among a set or series of values after they have been arranged in numerical order. Median thus means the middle of the set of values. When two numbers fall in the middle, you simply add the value of the two numbers and divide by 2 to get the middle of the two numbers.

Practice Test Questions on Mean, Median and Mode

Example 5: Every natural number is a whole number, integer, and a rational number. Reviewing the descriptions above, natural numbers are found within the sets of whole numbers, integers, and rational numbers. That makes it a true statement. We can also use the diagram of funnels above to help us answer this question.
